Examiner's signature, if required

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant argues that Chang et al. fail to disclose the oxidation preventing layer arranged to contact all of the at least one bit line layers. This argument is not persuasive because Chang et al clearly disclose that the oxidation preventing layer (315) directly contact the entire top surface of the bit line (313) (see fig. 3g). Also, the claim does not require the oxidation preventing layer directly contact the entire top surface and the entire vertical sidewalls of the bit line layer.
